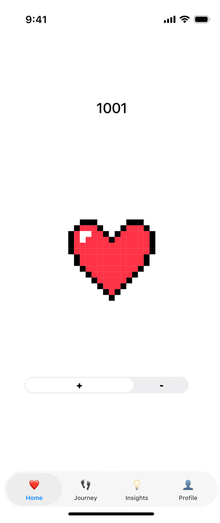
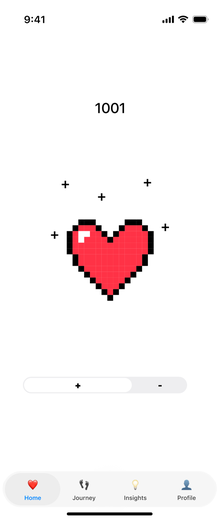
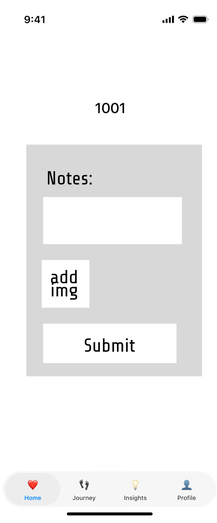
Home Page:

1. Action: choose + or -, then multiple-click the Heart icon with animation. After a multiple-click, if there is no click for 1.5 seconds, then pop up [add notes and img].
2. Default: use location + time for default notes if empty.
3. Value system: use sigmoid function for multiple-click value increased/decreased. Prioritize users' experience without cause value inflation.
4. Technical details: use Debounce. update database once after a multiple-click. DO NOT UPDATE DATABASE EVERY CLICK!!



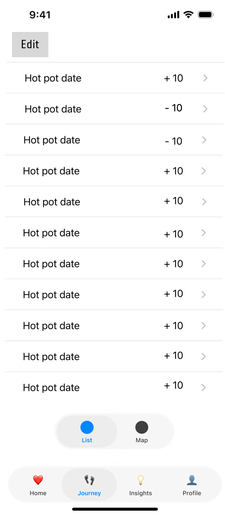


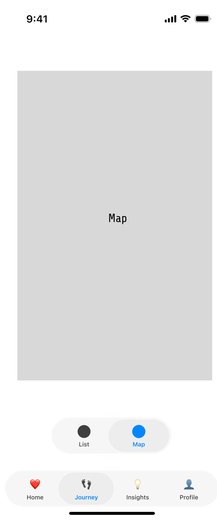


Journey Page:

Journey page is actually history and map view.

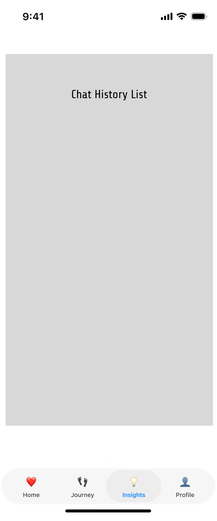
1. List view: I didn't draw it but showing location on the list view is recommended. Feel free to use imagination to design it while keeping all current functions.

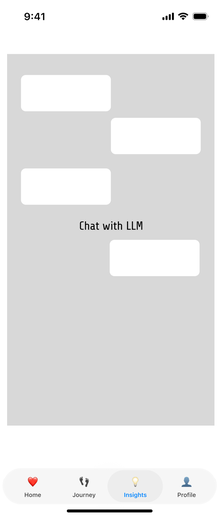




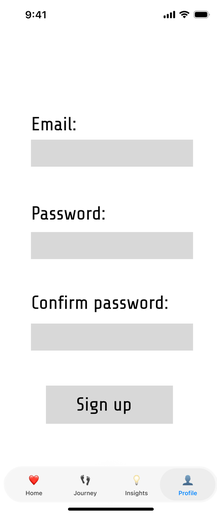
Insight Page:

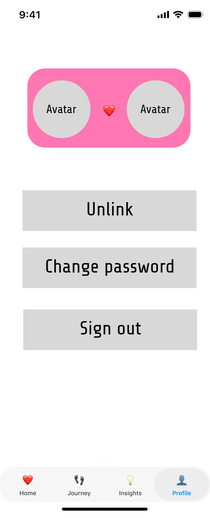
Insight page is where user can send history record to LLM and ask for further suggestions.





Profile Page:

Standard Sign in/Sign up with accounts link.




1. Sign up: email verification is recommended.
2. Notification module: feel free to implement it. We need it to receive accounts link invitation/+and-notification/etc..
